

kaweesha weerasinghe

Fullstack Engineer

kaweeshahansani0710@gmail.com | +94778682365

PROFESSIONAL SUMMARY

I'm a Passionate software engineering undergraduate with hands-on experience building full stack applications. I think beyond code focusing on architecture, scalability and clean design. Strong foundation in OOP and DSA from university, with practical experience in Docker and modern deployment. Currently growing into AI integration to build smarter, more impactful web products

EDUCATION

Bsc. in Information Technology | University of Moratuwa
GPA: 3.56

PROJECTS

Microcontroller-Based Application

Secure Lock Pro is an IoT-based smart door lock system developed as our Level 01 Microcontroller-Based Application Development Project. It provides multi-layered security using biometric authentication (fingerprint & facial recognition), RFID, passcodes, and mobile app control. The system includes intrusion detection with vibration sensors, live camera monitoring, real-time Firebase alerts, and remote access via a Flutter mobile app. Built using Raspberry Pi Zero 2 W with cloud integration (AWS & Firebase), it ensures secure, reliable, and uninterrupted operation for both residential and commercial environments.

Technologies: Internet of Things, Microcontroller Programming (Raspberry Pi), Sensor & Module Interfacing

E-commerce Application

This platform allows users to browse shoe collections, view detailed product information, add items to the cart, place orders, and communicate directly with the admin through an integrated messaging system. The Admin Panel enables efficient management of products, orders, users, and messages, allowing admins to respond to customer inquiries and ideas, ensuring better engagement and smooth day-to-day operations.

Technologies: React.js, node.js, Express, MongoDB

Water Bill Management System

Water Bill Management System for a local government body (Pradeshiya Sabha) that handles meter readings, automatic billing calculations, AI-powered usage predictions, scheduled WhatsApp notifications, online and manual payment tracking, and admin reporting — supporting both Sinhala and English languages.

Technologies: React(typescripr), springboot, postgresQL

Blood Donation Management App

Blood Donation Management App is an intelligent platform that connects verified donors with hospitals in need. Using AI, it automatically matches donors to requests, manages donation events, and helps save lives efficiently

Technologies: React.js, Node, Express, MongoDB

SKILLS

React.js, Typescript, Node.js, Express.js, MongoDB, PostgreSQL, Springboot, My SQL, OOP, DSA, Docker

CERTIFICATIONS

Docker Foundations Professional Certificate | Docker | 2024-02

Software Development with Amazon Q Developer | AWS Training & Certification | 2025-10

Cloud computing for beginners | CoDeKu DevOps Academy | 2025-06

Intermediate of Java | Sololearn | 2025-09

Intermediate of SQL | Sololearn | 2025-01
